The understanding that continuous improvement, innovation, and development are the only way to raise the competition advantage is our most important company principle. FMS Silo follows high quality production, quality policy, and post-sale service principles in the international markets exactly same as we follow in domestic market.

With an international and global approach to the same commercial and production approach, FMS Silo aims to create a platform that presents a “Total Solution” in a strategic partnership approach. In addition to turnkey project base, we provide consultancy to the customer, too.
Advantages

Adding all the electrical and mechanical areas of the facility into the automation system, you can control the entire facility through your computer or smart-phone. Automations are essential for silo facilities. An automation system inside a facility enables you to follow the grain flow in your conveyors and silos, and also helps you to intervene when needed.

Faydaları

Çelik silo tesisinde bulunan elektrikli ve mekanik alanların tamamını otomasyona dahil ederek, bütün tesisinizi bir bilgisayar ekranından veya akıllı telefon yardım ile yönetebilirsiniz. Otomasyon bir silo tesisinin olmazsa olmazdır. Silo tesisindeki iyi bir otomasyon sistemi; hem tüm silolar ve konveyörlerdeki tahil akışını izleyebilme, hemde anında müdahale edebilme imkânı sağlar.
